These drafts are calculated basis following parameters : depth at chart datum at estuary 5.60 m, max size of vessel 185 m x 32 m, speed 12 knots

The SW drafts are the drafts read prior to entering river. The FW drafts alongside are subject to Harbourmaster's authorization.

The calculations are made basis normal hydrological conditions, without decrease, with a nominal flow of 250 m3/s and atmospheric pressure of 1013 hPa.

This table is intended as an indication only - the vessel's agent must check each time with Senior Pilot for the period in question.
